What You Don't Know About Storm Inlet Protection: The Law and Your Responsibility at Construction Sites

Before breaking ground on any new site, developers must meet several legal requirements. Sites occupying one or more acres (and smaller ones affiliated with larger developments) cannot be disturbed without a National Pollutant Discharge Elimination System (NPDES) construction storm water permit.

A prerequisite to getting this permit is ... [CLICK TO KEEP READING](#)

Dear Dan,

We hope 2010 has begun well for you. Following is information to help you save time and money at your business in the year ahead, and lend a hand to those in need ...

Help in Haiti

As construction industry professionals and more importantly, human beings, we ask ourselves how we can help in the aftermath of Haiti's devastating earthquake. Here are a few industry-related leads we found for those looking to lend a hand:

In addition, the founder and former CEO of Boston-based Shawmut Design & Construction, James S. Ansara, has set up The Haiti Fund, which will, in part, help secure materials, equipment, fuel and personnel for the construction of greatly-needed medical facilities. Ansara has pledged to match all fund contributions up to \$1 million by the Ansara Family Fund at the Boston Foundation. For more information, [click here](#).

Insider Tip - Inlet Protection During Winter Months

Think you don't need to worry about sediment control and inlet protection when the ground is frozen? Think again.

Protecting job site inlets and providing sediment control measures are just as important during the winter as they are throughout the rest of the year. Make sure you have regulation-compliant sediment control products in place on your job sites even during hard freezes to handle winter storm runoff and thaws whenever they occur.

Remember to maintain inlet protection devices year-round, too. Keep the areas surrounding filters, bags and sacks clear, and check these products at least weekly and after every storm event. Clean out snow and accumulated sediment as needed and replace or repair products if damage exists.

Need advice on securing your job sites with the best sediment control and inlet protection products on the market today? Contact Dandy at **1-800-591-2284** or via email at info@dandyproducts.com.

Dandy University ... Open and FREE!

Class has started, and you don't want to miss it! Save money and time with a FREE Dandy education, available 24/7 on the new Dandy website.

Dandy University features articles, videos and real case studies involving Dandy products, as well as complete product specs and CAD diagrams. Read

Dandy Facts

1. The human brain is much more active at night than during the day.
2. Snow insulates well. Just 10 inches of snow can provide as much insulation as 6 inches of fiberglass.
3. Snakes can see through their eyelids.
4. Johnny Carson never owned a television.
5. The can of Pepsi briefly visible in "The Empire Strikes Back" during the attack on Hoth was planted there, on the set, by a disgruntled technician.
